

POW Ecosystem – an EOS-based exchange and value reallocation platform

How it works

POW Ecosystem is an algorithmic exchange built on EOS that distributes all created value among its token holders. Every transaction with internal POW tokens generates dividends. The higher your share in the circulating token supply, the more dividends you'll receive. Users can further increase their rewards.

The nominal EOS/POW price isn't fixed. Quite the contrary: by means of a complex mathematical algorithm, it's automatically adjusted after every transaction, be it purchase, sale, or transfer. It increases slightly whenever someone buys POW – and falls a little when one sells or transfers POW.

The ecosystem also has a second token, POWx. It can be freely traded on third-party exchanges and converted into POW and back. This connects the fully transparent, verifiable, algorithm-driven world of the POW Ecosystem with the volatile external markets.

All transactions in the system are executed by means of smart contracts. Internal POW tokens are generated at purchase and burned at sale, eliminating the risk of excess volatility. This gives POW traits of a stablecoin: at any moment, it's fully backed by EOS in the contract.

Features

Perfect economic simulation: the system doesn't require human involvement

The price of internal POW tokens is adjusted automatically

Tokens (POW/POWx) generation, transfer, and conversion are fully governed by the smart contract

A fully transparent mechanism of value reallocation

Blockchain stability is ensured by masternodes

Advantages of the POW

- Every member accrues dividends on all transactions in the system;
- All dividends are paid in EOS;
- Instant dividend withdrawals;
- Transparent automated token pricing;
- Extremely fast execution (above 2500 tps) & zero blockchain fees;
- Fully distributed – all operations are executed on the blockchain;
- Extra rewards for affiliate program members;
- Long-term system stability is ensured by complex mathematical algorithms;
- Securely protected against hacker attacks;
- No system fee on dividend withdrawals

Revenue distribution

100% of all revenue will be allocated to the token holders by means of a specially designed smart contract. The dividends share due to each user will depend on the amount of POW tokens they hold.

Affiliate program

- Whenever someone buys POW using your referral link, you instantly get 30% of the accrued dividends in EOS;
- To join the program, a stake of 1 000 POW or more is required;
- Affiliate rewards get transferred to your EOS-wallet instantly
